PIPE AND TUBING

EndoPure

The New Standard in Polyethylene Pipe and Tubing

EndoPure is a unique premium pipe and tubing; below are a few of the key points that distinguish **EndoPure** from other HDPE products:

- **EndoPure** is heavier than standard products by 3+% providing an extra margin of safety.
- **EndoPure** is color coded blue to meet the coming international standard for water pipe and tubing. **EndoPure** will always provide a visual identification in the crowded underground.
- **EndoPure** has a clear core of virgin natural HDPE providing visible proof of quality and the assurance that no regrind materials have been used to produce **EndoPure**.
- **EndoPure** is produced from High Performance HDPE resin with a 20-year track record of quality and performance. This is the same resin used for much of the gas pipe installed in the USA.
- **EndoPure** when accidentally gouged or cut will show the clear core, a visual indication that significant damage has occurred, something that is hard to spot on solid colored pipe.
- **EndoPure** is entirely compatible with current fitting and connectors made for HDPE water pipe and tubing.
- **EndoPure** has continuous consecutive footage marks every two feet to assist in installation.
- **EndoPure** is UV stabilized for protection from sunlight deterioration. When installed as underground water service tubing the minimum life expectancy is 100 years.
- **EndoPure** printing is permanently embossed.
- **EndoPure** is NSF Certified and meets AWWA C901-96 standards.
- **EndoPure** is backed by the strongest warranty in the industry. Endot is so confident that **EndoPure** is the best, most durable pipe and tubing available, we provide a warranty with no time limit and a labor reimbursement 3 times that of other plastic pipe and tubing.
