PIPE AND TUBING • DUCT AND INNERDUCT

PALLETIZED / STRETCH WRAPPED PIPE AND TUBING

Endot makes available as an added cost option palletized/stretch wrapped packaging. This method of packaging speeds unloading of deliveries and keeps the product neat and orderly until it is sold. The stretch wrapping also keeps the product clean and free of dirt and debris when stored outdoors.

If you desire to have your pipe or tubing packaged this way be sure to specify it on your order.

When placing an order it may be easier to order by pallet rather than by the number of coils. Below are the standard pallet packages for each size of Endot pipe and tubing.

Please note that for large diameter pipe pallets, Endot will nest small diameter pipe inside to obtain the highest density pack for a trailer.

SIZE	QUANTITY PER PALLET	SIZE	QUANTITY PER PALLET
3/4" X 100'	20	1/2" X 100'	25
3/4" X 400'	10	1/2" X 400'	12
3/4" X 500'	10		
1" X 100'	17	1-1/4" X 100'	15
1" X 200'	11	1-1/4" X 300'	9
1" X 300'	10	1-1/2" X 100'	15
1" X 400'	8	1-1/2" X 300'	9
1" X 500'	8		
1" X 600'	6	2" X 100'	10
		2" X 200'	8

NOTE: Orders requiring special sized pallets or quantities per pallet less than standard will result in an increase in the pipe pricing. Pallets used are for storage on level ground only and may not be suitable for use in pallet racking systems.
